### UTPro 8x8 Matrix Switcher

In July 2010, AMX will begin shipping its UTPro 8x8 Matrix Switcher. It says the HDMI UTPro delivers uncompressed, 1920x1200 HD content up to 100 meters, making it the highest-performance digital media switcher available.

The HDMI UTPro is a full matrix switcher that delivers eight channels of HDMI, with HDCP authentication, across a network via a single UTP cable. Utilizing Valens' HDBaseT Technology, a new standard for digital transmission in the AMX UTPro line, users can transmit HD video, audio, internet, two-way control and power up to 100 meters without the need for repeaters.
